AMENDMENT TO THE CLAIMS

[c01] (Currently Amended) A method, comprising:

accessing a profile storing information for generating a message;

at a time indicated in the profile, generating the message;

retrieving a voice communications address <u>and another voice communications address</u> from the profile;

routing the message to a destination <u>Internet Protocol</u> address; and

when an off-hook condition is detected at the <u>voice communications</u> ~~destination~~ address within a pre-selected time period from the routing of the message, then automatically establishing a voice connection between the <u>voice communications</u> ~~destination~~ address and the <u>another</u> voice communications address.

[c02] (Previously Presented) The method of claim 1, wherein when the off-hook condition is not detected within the pre-selected time period, then declining to automatically establish the voice connection.

[c03] (Previously Presented) The method of claim 1, further comprising retrieving a stock symbol from the profile.

[c04] (Previously Presented) The method of claim 3, further comprising retrieving an origination address from the profile, the origination address indicating from where a stock quote may be obtained for the stock symbol.

[c05] (Previously Presented) The method of claim 4, further comprising querying the origination address to obtain the stock quote.

[c06] (Previously Presented) The method of claim 5, further comprising including the stock quote in the message routed to the destination address.

[c07] (Previously Presented) The method of claim 4, further comprising calling the origination address to obtain the stock quote.

[c08] (Previously Presented) The method of claim 1, further comprising retrieving a parameter from the profile that describes an alert that accompanies the message.

[c09] (Previously Presented) The method of claim 1, further comprising retrieving a day of a week from the profile for generating the message.

[c10] (Previously Presented) The method of claim 1, further comprising retrieving from the profile information describing an amount of owned shares.

[c11] (Currently Amended) A computer program product comprising a computer readable medium storing processor executable instructions for performing a method, the method comprising:

> accessing a profile storing information for generating a message;

> at a time indicated in the profile, generating the message;

> retrieving a voice communications address <u>and another voice communications address</u> from the profile;

> routing the message to a destination <u>Internet Protocol</u> address; and

> when an off-hook condition is detected at the <u>voice communications</u> ~~destination~~ address within a pre-selected time period from the routing of the message, then automatically establishing a voice connection between the <u>voice communications</u> ~~destination~~ address and the <u>another</u> voice communications address.

[c12] (Currently Amended) A system, ~~comprising~~ <u>operative to</u>:

> <u>access</u> ~~means for accessing~~ a profile storing information for generating a message;

at a time indicated in the profile, generate ~~means for generating~~ the message;

retrieve ~~means for retrieving~~ a voice communications address and another voice communications address from the profile;

route ~~means for routing~~ the message to a destination Internet Protocol address; and

when an off-hook condition is detected at the voice communications ~~destination~~ address within a pre-selected time period from the routing of the message, then ~~means for~~ automatically establish ~~establishing~~ a voice connection between the voice communications ~~destination~~ address and the another voice communications address.

[c13] (Currently Amended) The system of claim 12, further comprising operative to:

retrieve ~~means for retrieving~~ a stock symbol from the profile;

retrieve ~~means for retrieving~~ an origination address from the profile, the origination address indicating from where a stock quote may be obtained for the stock symbol;

query ~~means for querying~~ the origination address to obtain the stock quote; and

include ~~means for including~~ the stock quote in the message routed to the destination address.

[c14] (Currently Amended) A method, comprising:

storing in a profile a subscriber's telephone number and a stock broker's telephone number;

generating an incoming calling line identification signal comprising a stock quote;

transmitting the incoming calling line identification signal to ~~receiving a stock quote at~~ a destination Internet Protocol address associated with the subscriber's telephone number;

if an off-hook condition is detected at the subscriber's telephone number ~~destination address~~ within a pre-selected time period from the transmission ~~receipt~~ of the

stock quote, then retrieving ~~the~~ the stock broker's telephone number ~~a voice communication address~~ and automatically establishing a call ~~voice connection~~ between the subscriber's telephone number and the stock broker's telephone number ~~destination address and the voice communications address~~; and

if the off-hook condition is not detected within the pre-selected time period, then declining to automatically establish the call ~~voice connection~~.

[c15]   (Currently Amended) The method of claim 14, further comprising retrieving from the profile an amount of shares owned by the subscriber ~~establishing a call to the voice communications address~~.

[c16]   (Currently Amended) The system of claim 12, further operative to retrieve ~~comprising means for retrieving~~ a parameter from the profile that describes an alert that accompanies the message.

[c17]   (Currently Amended) The system of claim 13, further operative to call ~~comprising means for calling~~ the origination address to obtain the stock quote.

[c18]   (Currently Amended) A system, ~~comprising~~ operative to:

receive an incoming calling line identification signal comprising a stock quote at destination Internet Protocol address associated with a telephone number;

~~means for receiving a stock quote at a destination address;~~

if an off-hook condition is detected at the telephone number ~~the destination address~~ within a pre-selected time period from the receipt of the stock quote, then retrieve another telephone number ~~means for retrieving a voice communication address~~ and ~~means for~~ automatically establish a call ~~establishing a voice connection~~ between the telephone number ~~destination address~~ and the another telephone number ~~voice communications address~~; and

if the off-hook condition is not detected within the pre-selected time period, then decline ~~means for declining~~ to automatically establish the ~~voice connection~~ <u>call</u>.

[c19]   (Currently Amended) The system of claim 18, further <u>operative to retrieve an amount of shares owned</u> ~~comprising means for establishing a call to the voice communications address~~.

[c20]   (Currently Amended) The system of claim 18, further <u>operative to prioritize</u> ~~comprising means for prioritizing~~ receipt of the stock quote over receipt of an incoming caller identification signal.
